# Security socket removal tool

If there is a security socket (sleeve) preventing you from unscrewing
the coaxial cable and removing your equipment, use the socket remover.
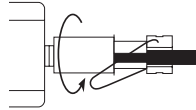

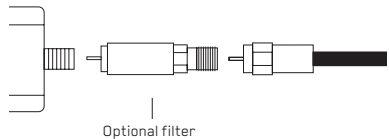

1.
Locate the devices that have
a security socket.

2.
Insert the socket remover as far as
possible into the security socket.
Turn **counter-clockwise**.

3.
Remove the security socket and
coaxial cable from the device.
If there is a filter in the socket,
use the removal tool to remove it too.

Optional filter

If there is no security socket:

You can unscrew the cable by hand
(counter-clockwise).
Use the security socket remover if you can't
unscrew the cable by hand.

What to do with these accessories?

Security socket and filter: they can be put
in the recycling bin.

Security socket remover:
bring it back to store when you bring your
old devices in and it will get recycled.
